## Project Design Phase-II Technology Stack (Architecture & Stack)

| Date          | 22 October 2022                                    |
|---------------|--|
| Team ID       | PNT2022TMID51663                                   |
| Project Name  | Car Resale Value Prediction using Machine Learning |
| Maximum Marks | 4 Marks  |

## **Technical Architecture:**

The Deliverable shall include the architectural diagram as below and the information as per the table 1 & table 2

**Table-1 : Components & Technologies:** 

| S.No | Component              | Description  | Technology  |
|------|------------------------|--|---|
| 1.   | User Interface         | User access to the application through the Web UI      | HTML  |
| 2.   | Application Logic-1    | Creating an application interface                      | Python and Flask  |
| 3.   | Application Logic-2    | Machine learning models                                | Machine learning algorithms                                       |
| 4.   | Application Logic-3    | Flask integration                                      | IBM Watson  |
| 5.   | File Storage           | File storage requirements                              | IBM Block Storage or Other Storage<br>Service or Local Filesystem |
| 6.   | External API-1         | Purpose of External API used in the application        | IBM GeoJSON and Node-RED  |
| 7.   | Machine Learning Model | Purpose of Machine Learning Model                      | Classification, Regression model etc                              |
| 8.   | Infrastructure (Cloud) | IBM Cloud App Configuration is a centralized IBM Cloud | Cloud Foundry   |

## **Table-2: Application Characteristics:**

| S.No | Characteristics          | Description  | Technology |
|------|--------------------------|--|------------|
| 1.   | Open-Source Frameworks   | There is one open source frameworks used                                   | Python     |
| 2.   | Security Implementations | List all the security / access controls implemented, use of firewalls etc. | Blockchain |
| 3.   | Scalable Architecture    | Justify the scalability of architecture (3 – tier, Micro-services)         | IBM Cloud  |

| 4. | Availability | Justify the availability of application (e.g. use of load balancers, distributed servers etc.)                            | IBM Watson Assistant |
|----|--------------|---|----------------------|
| 5. | Performance  | Design consideration for the performance of the application (number of requests per sec, use of Cache, use of CDN's) etc. | GeoJSON              |
